

Calculation Methods

Addition

| The different stages | Examples |
|--|--|
| Stage 1 Counting sets of objects | |
| Stage 2 Combining two sets of objects into one group and counting practically. | For $5 + 3$ the children may get 5 objects, and then 3 more and count how many altogether. |
| Stage 3 Drawing dots - informal jottings. Then counting how many altogether. | $3 + 5 = 8$  |
| Stage 4 Counting on, on a number line with numbers on it. | $5 + 3 = 8$  |
| Stage 5 Steps in addition can be recorded on a number line. The steps often bridge through a multiple of 10. 1) Partition the smaller numbers into tens and ones. 2) Add on the tens. 3) Add on the ones. | $7 + 8 = 15$  $37 + 28 = 65$  |

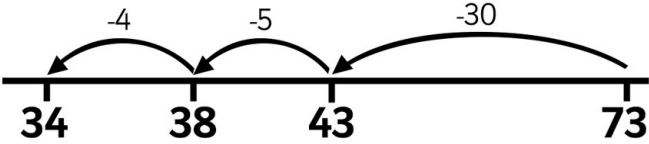

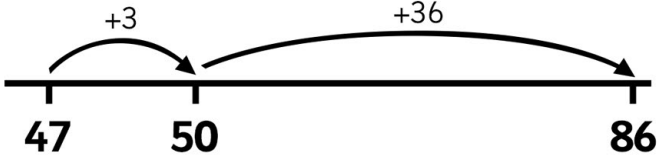

Calculation Methods

Addition

| The different stages | Examples |
|---|--|
| Stage 6 Partitioned numbers are then written under one another. | $\begin{array}{r} 87 \\ + 28 \\ \hline \end{array}$ $\begin{array}{r} 80 + 7 \\ 20 + 8 \\ \hline 100 + 15 = 115 \end{array}$ |
| Stage 7 Write the numbers in columns. Add the tens first. | $\begin{array}{r} 87 \\ + 28 \\ \hline 100 \\ 15 \\ \hline 115 \end{array}$ |
| Adding the ones first. | $\begin{array}{r} 87 \\ + 28 \\ \hline 15 \\ 100 \\ \hline 115 \end{array}$ |
| Stage 8 This then becomes the shorter method where numbers get carried into the next column. | $\begin{array}{r} 87 \\ + 28 \\ \hline 115 \\ \hline 11 \end{array}$ |
| Stage 9 Moving to adding three two digit numbers, two three digit numbers and numbers with amounts of digits. | $\begin{array}{r} 249 \\ + 96 \\ \hline 345 \\ \hline 11 \end{array}$ |

Calculation Methods

Subtraction

| The different stages | Examples |
|--|--|
| Stage 1 Practically get a group of objects together and then take some away. | |
| Stage 2 Jottings - draw a set of marks, and then cross some out. | $12 - 5 = 7$  |
| Stage 3 Count back on a number line with numbers already on it. | $12 - 3 = 9$  |
| Stage 4 Using a number line. Work by counting back. Also work out the difference by counting on. | $73 - 39 = 34$  Work out the difference between 47 and 86 = 39  |

Calculation Methods

Subtraction

| The different stages | Examples |
|--|---|
| Stage 5 Partitioned numbers are written under one another. This is how we start introducing the column subtraction method. | $77 - 25 =$ $\begin{array}{r} 70 + 7 \\ - 20 + 5 \\ \hline 50 + 2 = 52 \end{array}$ |
| Stage 6 (Replace with 2 digit numbers) These show the two steps that lead to the shortened version of the column subtraction method. Always start with the units number. | $73 - 26 =$ $\begin{array}{r} 70 + 3 \\ - 20 + 6 \\ \hline \end{array} \rightarrow \begin{array}{r} \text{(split 77)} \\ 60 \quad 13 \\ \cancel{70} + \cancel{3} \\ - 20 + 6 \\ \hline 40 + 7 \end{array} \rightarrow \begin{array}{r} 6 \quad 13 \\ \cancel{7} \cancel{3} \\ - 26 \\ \hline 47 \end{array}$ |
| Stage 7 (Replace with 3 digit numbers) These show the two steps that lead to the shortened version of the column subtraction method. Always start with the units number. | $652 - 475 =$ $\begin{array}{r} 600 + 50 + 2 \\ - 400 + 70 + 5 \\ \hline \end{array} \quad \begin{array}{r} 500 \quad 140 \quad 12 \\ \cancel{600} + \cancel{50} + \cancel{2} \\ - 400 + 70 + 5 \\ \hline 100 + 70 + 7 \end{array}$ $\begin{array}{r} 5 \quad 14 \quad 12 \\ \cancel{6} \cancel{5} \cancel{2} \\ - 475 \\ \hline 177 \end{array}$ |
| Stage 8 (Replace with 4 digit numbers including 0) | $\begin{array}{r} 5000 \quad 900 \quad 100 \\ \cancel{6000} + \cancel{900} + \cancel{100} + 9 \\ - 2000 + 100 + 20 + 3 \\ \hline 3000 + 800 + 80 + 6 \end{array} \rightarrow \begin{array}{r} 5 \quad 9 \quad 10 \\ 6009 \\ - 2123 \\ \hline 3886 \end{array}$ |

Calculation Methods

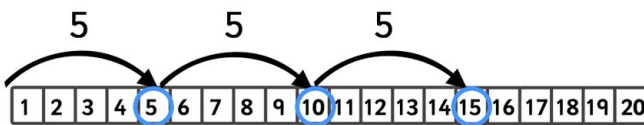

Multiplication

Year 2 2 times table
5 times table
10 times table

Year 3 3 times table
4 times table
5 times table
6 times table
10 times table

Year 4 Derive and recall multiplication facts for all tables up to 10×10

Within this teach how to know facts i.e.
 6×3 is 5×3 and then 1×3
 9×3 is 10×3 and then take away 3

| The different stages | Examples |
|--|---|
| Stage 1 Counting practically in repeated groups/patterns | |
| Stage 2 Grouping | $4 \times 2 = 8$  |
| Stage 3 Arrays | $4 \times 2 = 8$ or $2 \times 4 = 8$   |
| Stage 4 Repeated addition Repeated addition can be shown easily on a number line. | 5×3 is $5 + 5 + 5 = 15$ or 3 lots of 5  |

Calculation Methods

Multiplication

| The different stages | Examples | | | | | | | | |
|---|---|---|--|---|---------------------------------------|---|----|--|-----|
| Stage 5 Partitioning | $14 \times 6 =$ $10 \times 6 = 60$ $4 \times 6 = 24$ $60 + 24 = 84$ | | | | | | | | |
| Stage 6 The grid method. Place the number with the most digits in the left-hand column so that it is easier to add the answers of each part of the multiplication together. | $37 \times 8 =$ <table> <tr> <td>x</td><td>8</td></tr> <tr> <td>30</td><td>240</td></tr> <tr> <td>7</td><td>56</td></tr> <tr> <td></td><td>296</td></tr> </table> | x | 8 | 30 | 240 | 7 | 56 | | 296 |
| x | 8 | | | | | | | | |
| 30 | 240 | | | | | | | | |
| 7 | 56 | | | | | | | | |
| | 296 | | | | | | | | |
| Stage 7 Long multiplication. The next step is to show the method of recording in a column format, but showing the working. This links to the grid method above. Children should describe what they do by saying the actual values of the digits in the column. Eg. The first step in 37×8 is 'thirty multiplied by eight', not 'three times eight.' | <table> <tr> <td> $30 + 7$ $\begin{array}{r} \times 8 \\ \hline 240 \\ 56 \\ \hline 296 \end{array}$ </td> <td> $30 \times 8 = 240$ $8 \times 7 = 56$ </td> </tr> <tr> <td> 37 $\begin{array}{r} \times 8 \\ \hline 240 \\ 56 \\ \hline 296 \end{array}$ </td> <td> This is the slightly shorter version. </td> </tr> </table> | $30 + 7$ $\begin{array}{r} \times 8 \\ \hline 240 \\ 56 \\ \hline 296 \end{array}$ | $30 \times 8 = 240$ $8 \times 7 = 56$ | 37 $\begin{array}{r} \times 8 \\ \hline 240 \\ 56 \\ \hline 296 \end{array}$ | This is the slightly shorter version. | | | | |
| $30 + 7$ $\begin{array}{r} \times 8 \\ \hline 240 \\ 56 \\ \hline 296 \end{array}$ | $30 \times 8 = 240$ $8 \times 7 = 56$ | | | | | | | | |
| 37 $\begin{array}{r} \times 8 \\ \hline 240 \\ 56 \\ \hline 296 \end{array}$ | This is the slightly shorter version. | | | | | | | | |
| Stage 8 Short multiplication. The next step involves adding 240 and 56 mentally with only the 5 in the 56 recorded. | 37 $\begin{array}{r} \times 8 \\ \hline 296 \\ 5 \end{array}$ | | | | | | | | |

Calculation Methods

Multiplication

| The different stages | Examples | | | | | | | | | | | | | | | | |
|--|--|---|---|---|--|----|-----|-----|-----|---|-----|----|-----|--|--|--|------|
| Stage 9 Multiplying two, two digit numbers. This follows the same steps as the first grid method but for 2 digit numbers. | 47×23 <table><tr><td>x</td><td>20</td><td>3</td><td></td></tr><tr><td>40</td><td>800</td><td>120</td><td>920</td></tr><tr><td>7</td><td>140</td><td>21</td><td>161</td></tr><tr><td></td><td></td><td></td><td>1081</td></tr></table> | x | 20 | 3 | | 40 | 800 | 120 | 920 | 7 | 140 | 21 | 161 | | | | 1081 |
| x | 20 | 3 | | | | | | | | | | | | | | | |
| 40 | 800 | 120 | 920 | | | | | | | | | | | | | | |
| 7 | 140 | 21 | 161 | | | | | | | | | | | | | | |
| | | | 1081 | | | | | | | | | | | | | | |
| Stage 10 The amount of recording is reduced but children still need to follow each step of the grid method. | 47×23 is approximately 50×20 is 1000 <table><tr><td>$\begin{array}{r} 47 \\ \times 23 \\ \hline 140 \\ 800 \\ 21 \\ 120 \\ \hline 1081 \end{array}$</td><td>$20 \times 7 = 140$ $20 \times 40 = 800$ $3 \times 7 = 21$ $3 \times 40 = 120$</td></tr></table> | $\begin{array}{r} 47 \\ \times 23 \\ \hline 140 \\ 800 \\ 21 \\ 120 \\ \hline 1081 \end{array}$ | $20 \times 7 = 140$ $20 \times 40 = 800$ $3 \times 7 = 21$ $3 \times 40 = 120$ | | | | | | | | | | | | | | |
| $\begin{array}{r} 47 \\ \times 23 \\ \hline 140 \\ 800 \\ 21 \\ 120 \\ \hline 1081 \end{array}$ | $20 \times 7 = 140$ $20 \times 40 = 800$ $3 \times 7 = 21$ $3 \times 40 = 120$ | | | | | | | | | | | | | | | | |
| The amount of recording is reduced more. | 47×23 is approximately 50×20 is 1000 <table><tr><td>$\begin{array}{r} 47 \\ \times 23 \\ \hline 940 \\ 141 \\ \hline 1081 \end{array}$</td><td>$47 \times 20$ 47×3</td></tr></table> | $\begin{array}{r} 47 \\ \times 23 \\ \hline 940 \\ 141 \\ \hline 1081 \end{array}$ | 47×20 47×3 | | | | | | | | | | | | | | |
| $\begin{array}{r} 47 \\ \times 23 \\ \hline 940 \\ 141 \\ \hline 1081 \end{array}$ | 47×20 47×3 | | | | | | | | | | | | | | | | |

Calculation Methods

Division

Deriving and recalling division facts

Year 2

2 times table
5 times table
10 times table

Year 3

3 times table
4 times table
6 times table

Year 4

Derive and recall all
division facts for all
tables up to 10×10

The different stages

Stage 1

Children will develop their understanding of division and use jottings to support calculation.

Stage 2

Grouping

Stage 3

Arrays

Stage 4

Repeated addition

Repeated addition can be shown easily on a number line.

Examples

$$8 \div 2$$

Sharing equally

8 sweets shared between 2 people, how many do they each get?

Grouping or repeated addition

There are 8 sweets, how many people can have 2 sweets each?

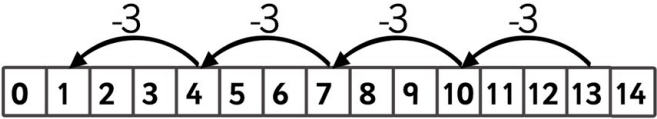

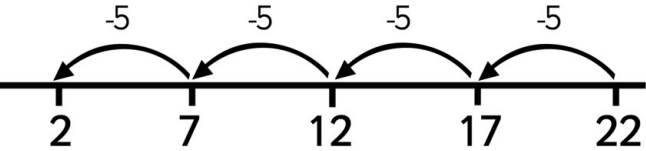

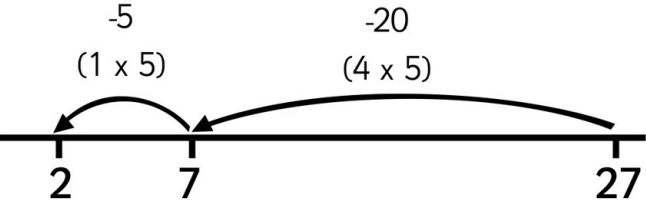

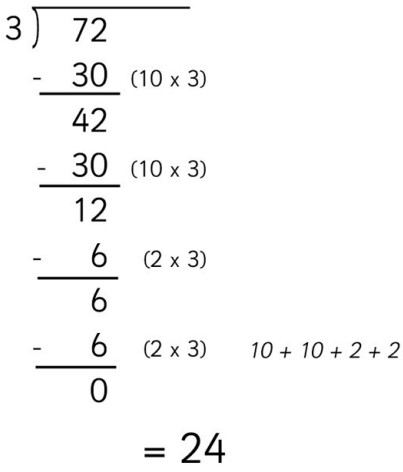

Arrays can also be used.

Calculation Methods

Division

| The different stages | Examples |
|--|---|
| Stage 2 Children should also move onto calculations involving remainders through repeated subtraction. | $13 \div 3 = 4r1$  |
| Stage 3 Children will develop their use of repeated subtraction to be able to subtract multiples of the divisor. Initially this should be multiples of 10, 5, 2 and 1 - numbers with which the children are more familiar. | $22 \div 5 = 4r2$  |
| Stage 4 Moving onto: | $27 \div 5 = 5r2$  |
| Stage 5 Tens Ones \div Ones The vertical method. (Also known as chunking) | $72 \div 3 =$  |

Calculation Methods

Division

| The different stages | Examples |
|---|---|
| <p>Stage 6 Hundreds Tens Ones \div Ones Introduce subtracting larger multiples of ten. This is called chunking.</p> | <p>$289 \div 8$</p> $ \begin{array}{r} 7 \overline{) 289} \\ \underline{- 160} \quad 10 \times 8 \\ 129 \\ \underline{- 120} \quad 20 \times 8 \\ 9 \\ \underline{- 8} \quad 6 \times 8 \\ 1 \end{array} $ <p>Answer = 36 r1</p> |
| <p>Stage 7 Long division Hundreds Tens Ones \div Ones</p> | <p>How many packs of 36 can we make from 828 biscuits?</p> <p>Start by multiplying 36 by multiples of 10 to get an estimate. As 36×20 is 720 and 36×30 is 1080 so we know it is between 20 and 30 packs. We start by subtracting 720 from 828.</p> $ \begin{array}{r} 36 \overline{) 828} \\ \underline{- 720} \quad 36 \times 20 \\ 108 \\ \underline{- 108} \quad 36 \times 3 \\ 0 \end{array} $ <p>Answer = 23</p> <p>In effect, the recording above is the long division method, though conventionally the digits of the answer are recorded above the line as shown.</p> $ \begin{array}{r} 23 \\ 36 \overline{) 828} \\ \underline{- 720} \\ 108 \\ \underline{- 108} \\ 0 \end{array} $ |

Calculation Methods

These are the calculation strategies used by most UK primary schools for maths. They are in stages rather than age groups as children develop mathematically at different ages. To establish which stage your child is working on, you can either ask your child's teacher or simply ask your child to carry out a related activity, for example by adding two numbers together. Just because your child is on a certain stage for one operation does not mean they will be on the same stage for others.

When your child is really confident with a stage then move them forward and start working on the next stage.
